

IT-SUPPORTED STATE-LAND MANAGEMENT IN A TRANSITIONAL ENVIRONMENT

- Examples from Eastern Germany and Mongolia -

BVVG
Bodenverwertungs- und -verwaltungs GmbH

TOPICS

1 BVVG'S LAND INFORMATION SYSTEM

- History and main components
- IT-strategy and development
- Identification of market values
- Sales and lease support

2 THE „LANDMANAGER SOFTWARE PACKAGE“ A LAND INFORMATION SYSTEM FOR MONGOLIA

- History
- Key elements

3 LESSONS LEARNED

HISTORY

BVVG's Mission:

- Founded in 1992 as subsidiary of the *German Treuhandanstalt* (THA-Privatization Agency)
- Sources of property: mainly expropriations between 1945 to 1949 and between 1949 to 1989
- 1992: approx. 1.8 m ha of agricultural land and 1.4 m ha of forestry land

Tasks:

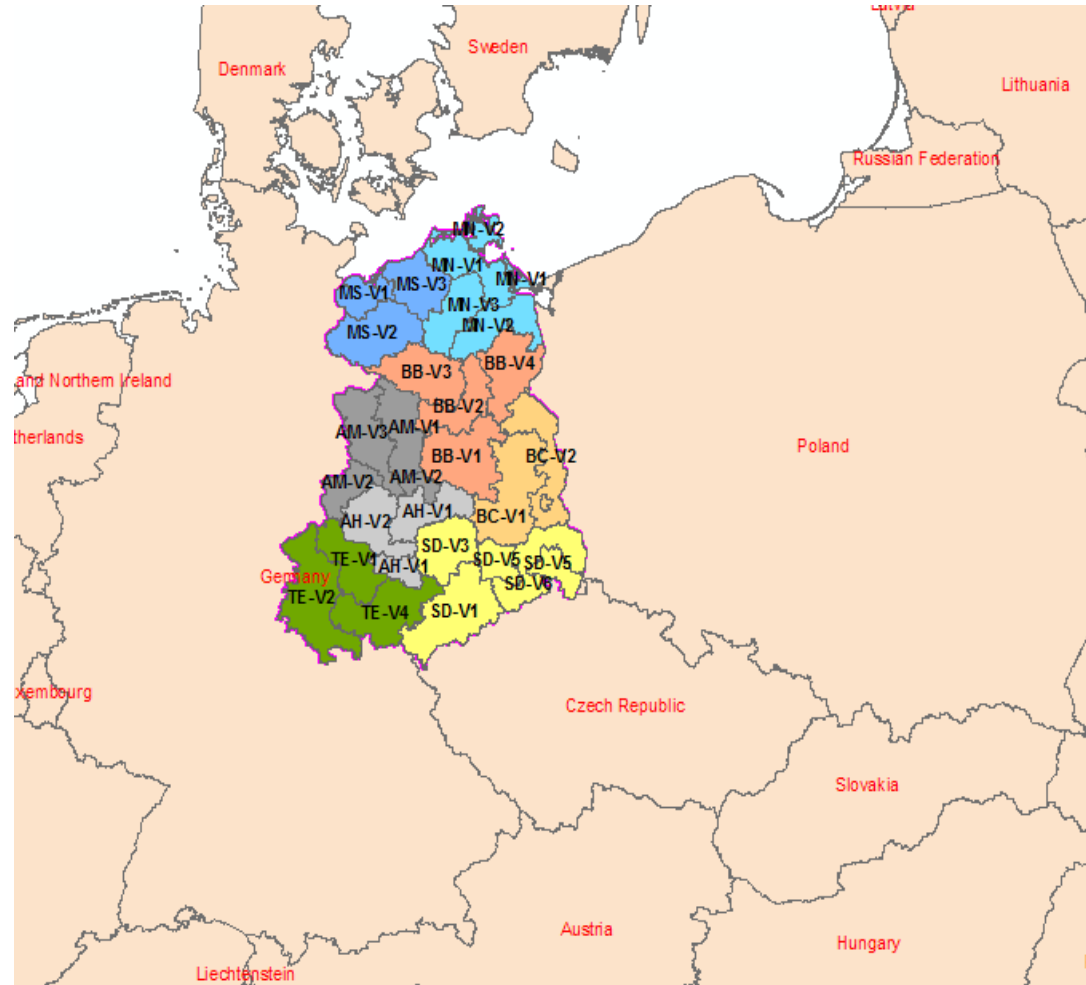

- Interim management (short and long-term lease) until decision on restitution/allocation/privatisation
- Privatisation according a Land Purchase Programme and selling at market value

BVVG - Flächenbilanz per 31.12.2009

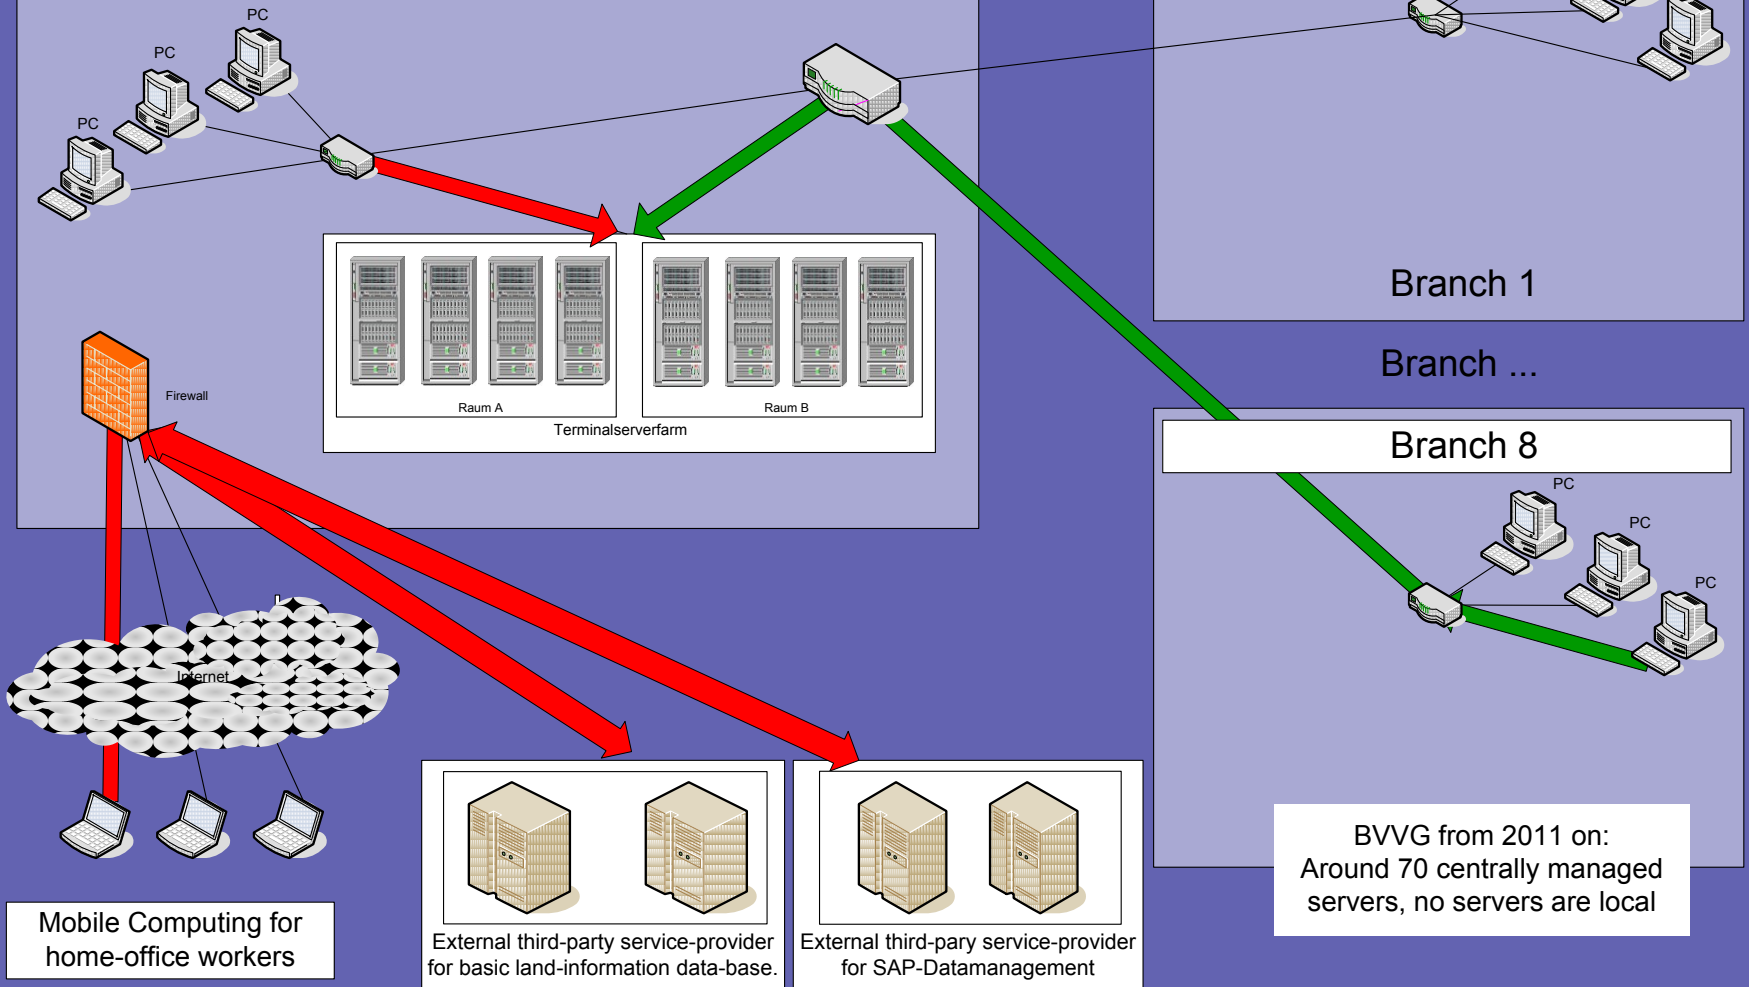

BVVG's Institutional Design

- Up to 12 Branches (in 2012: 8 → 2016: 4) for operational business
- Headquarters for central management, monitoring and supervision of tasks
- IT-Department at BVVG headquarters as precondition for centralized IT-support and information management

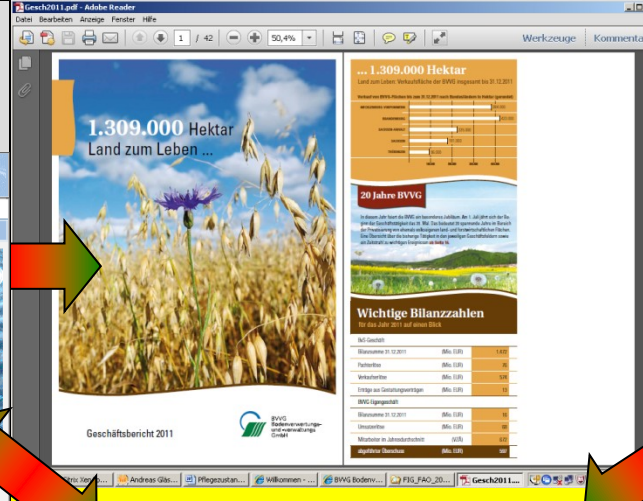

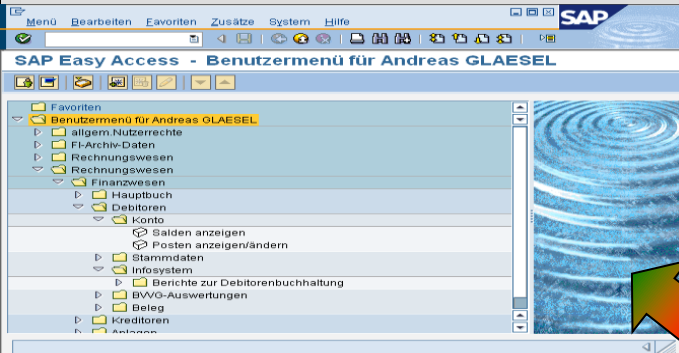

Main IT-Architecture BVVG - Terminal-Server-Architecture with an CITRIX-based virtualised environment

BVVG Headquarters (Berlin) – IT-Department

Enterprise Resource Planning with SAP

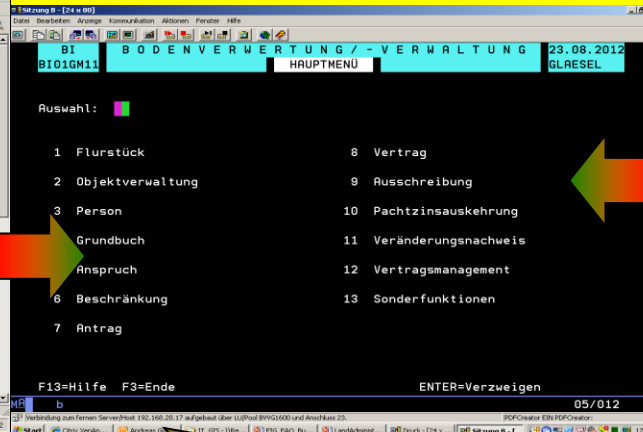

Email & Knowledge Database via Intranet

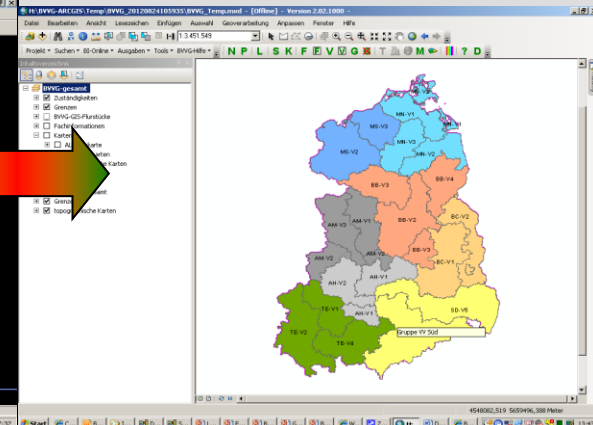

BVVG-Webpage

Basic Land Information Database

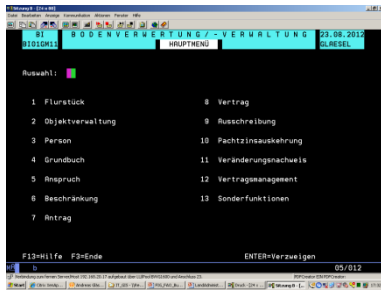

BVVG-GIS (ESRI)

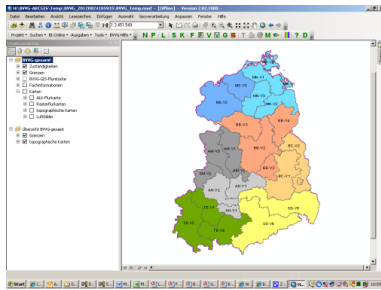

Other office-applications for automated business letters, contracts, Reporting/query tools, Archiving tools etc.

Online data-exchange with cadastre agencies of the five federal states and the federal agency for cadastre and mapping

Data Management of Large Data Sets

- Ca. 12 GB alphanumerical data
- More than 600 tables, views and catalogues
- Approx. 8,000,000 parcels with approx. 7,000,000 ha (historic and current data)

- Vector data – approx. 40 GB
I.e. cadastral maps, infrastructure, regional planning, contaminated sites
- Raster data – approx. 210 GB
I. e. aerial imagery, topographical maps

- Approx. 30 TB for unstructured data (guideline-databases, internal Email/communication etc.)

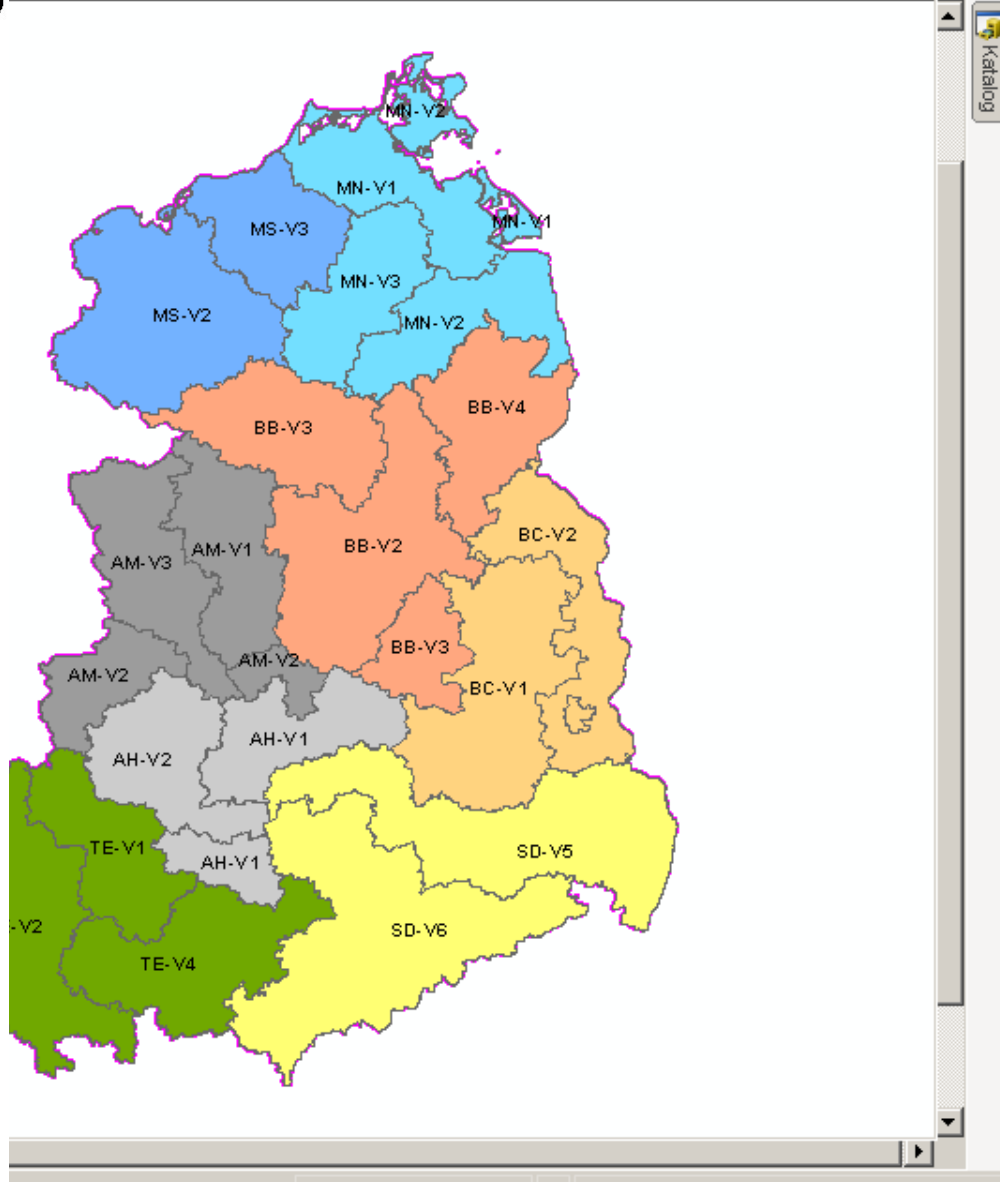

It-Strategy and Development

Experiences

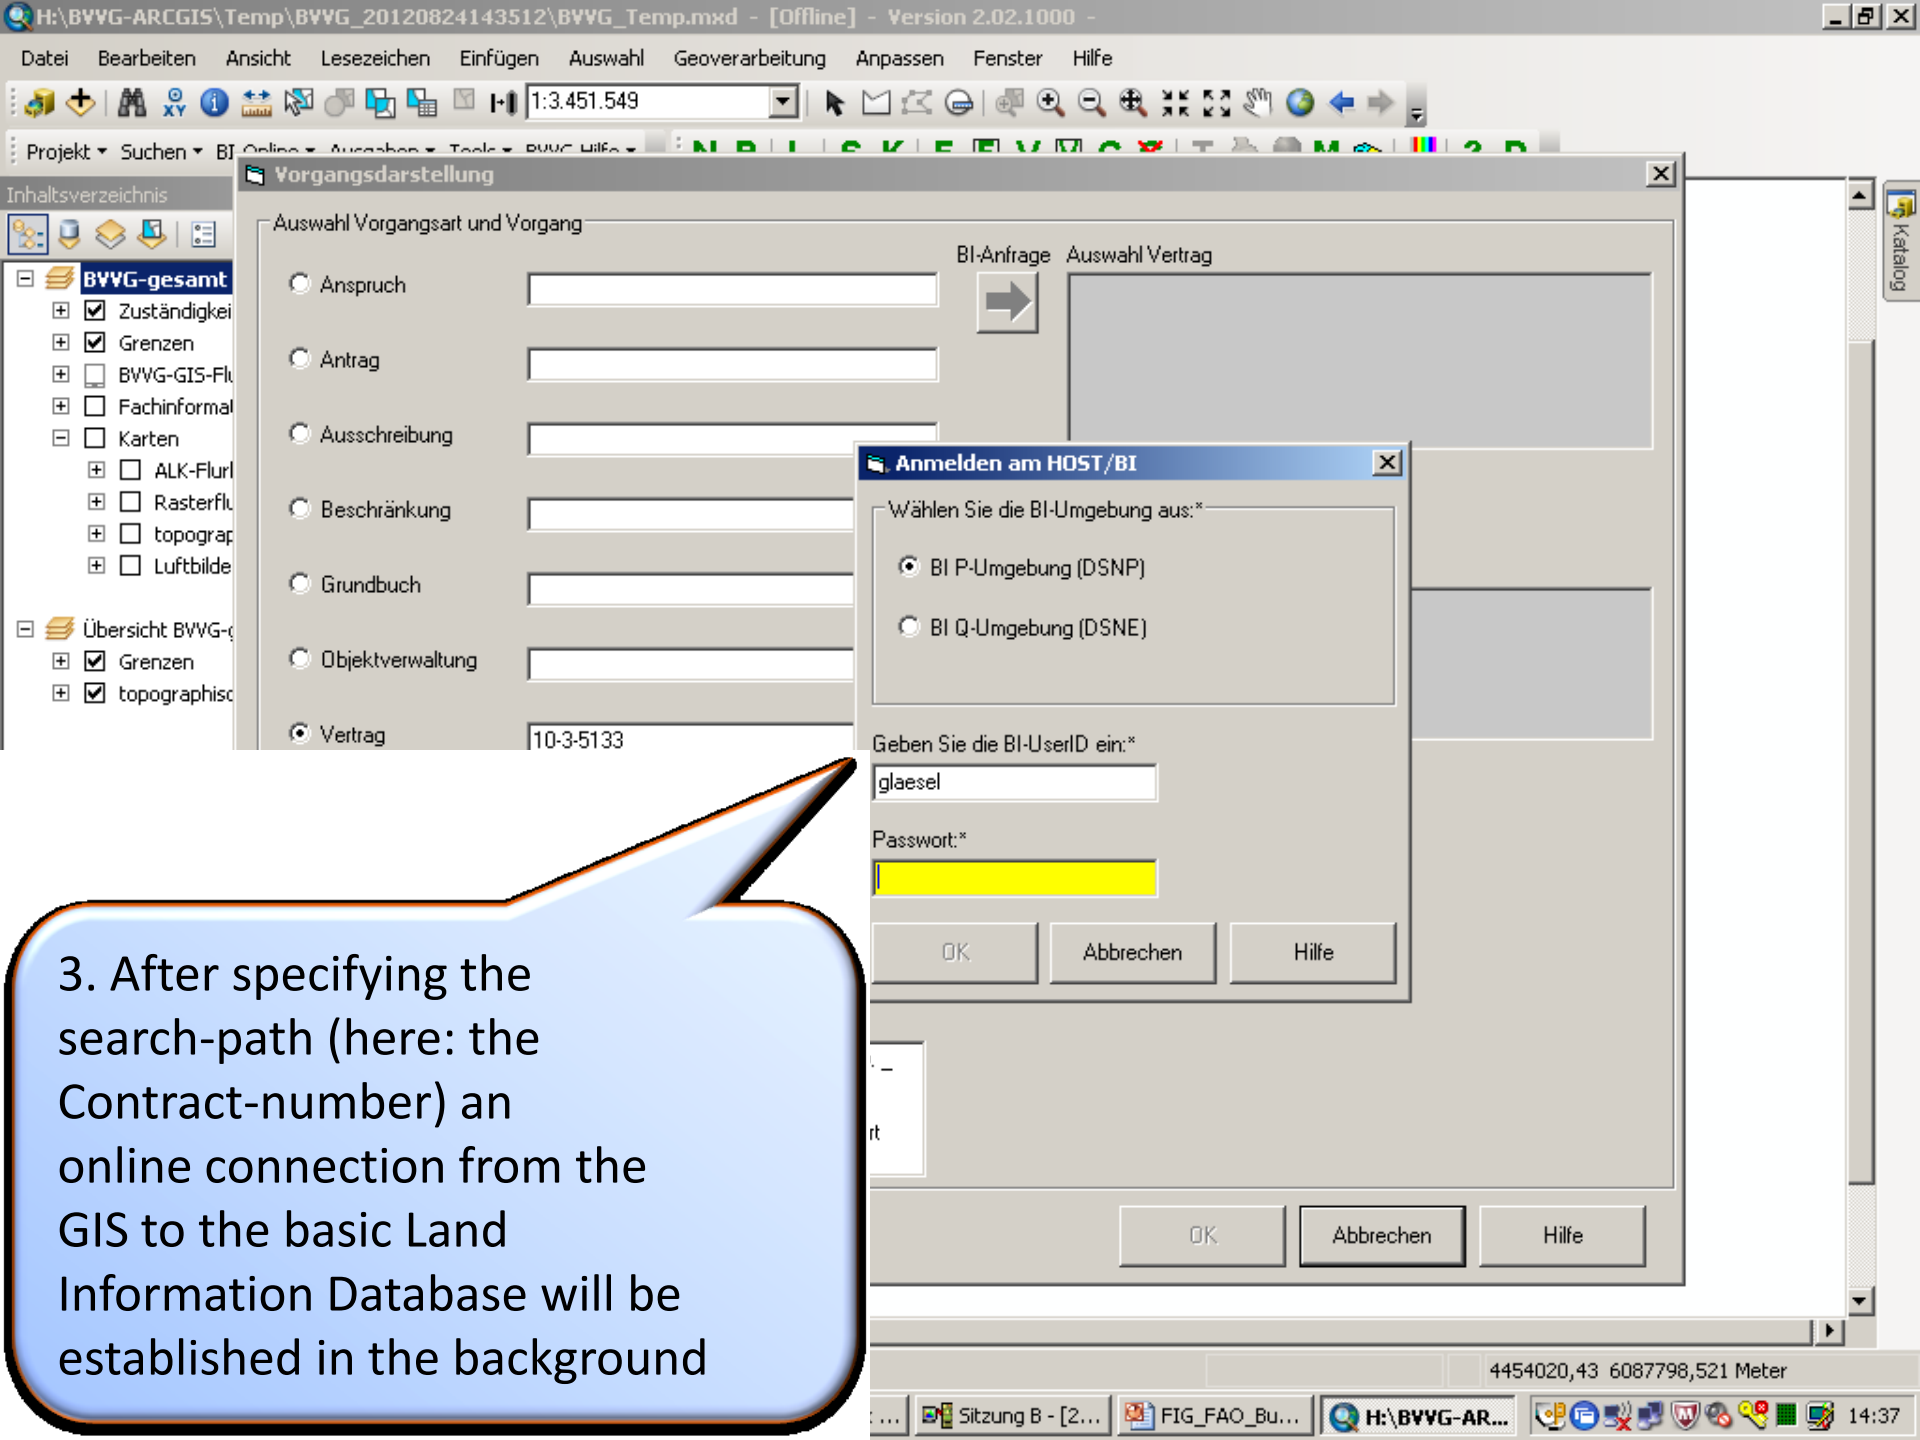

- A short/mid- and long term IT-strategy is useful for planning larger and smaller IT-investments and developments
- IT change management following a in-depth survey of new requirements
- Implementation of new features within the framework of already installed software/hardware.
- High human resource capabilities for IT is an important asset
- Development of applications is needed even after 20 years running the system, because of new legal/political requirements and for more efficient business processes
- For the basic land information database (since 20 years)
 - a permanent internal developer team (5 persons)
 - a permanent IBM developer team on site (3 persons) - excluding administrators
- For the GIS:
 - a BVVG-developer team (2 persons)
 - an IBM permanent team (3 Persons) on site - excluding administrators

PRACTICAL EXAMPLE

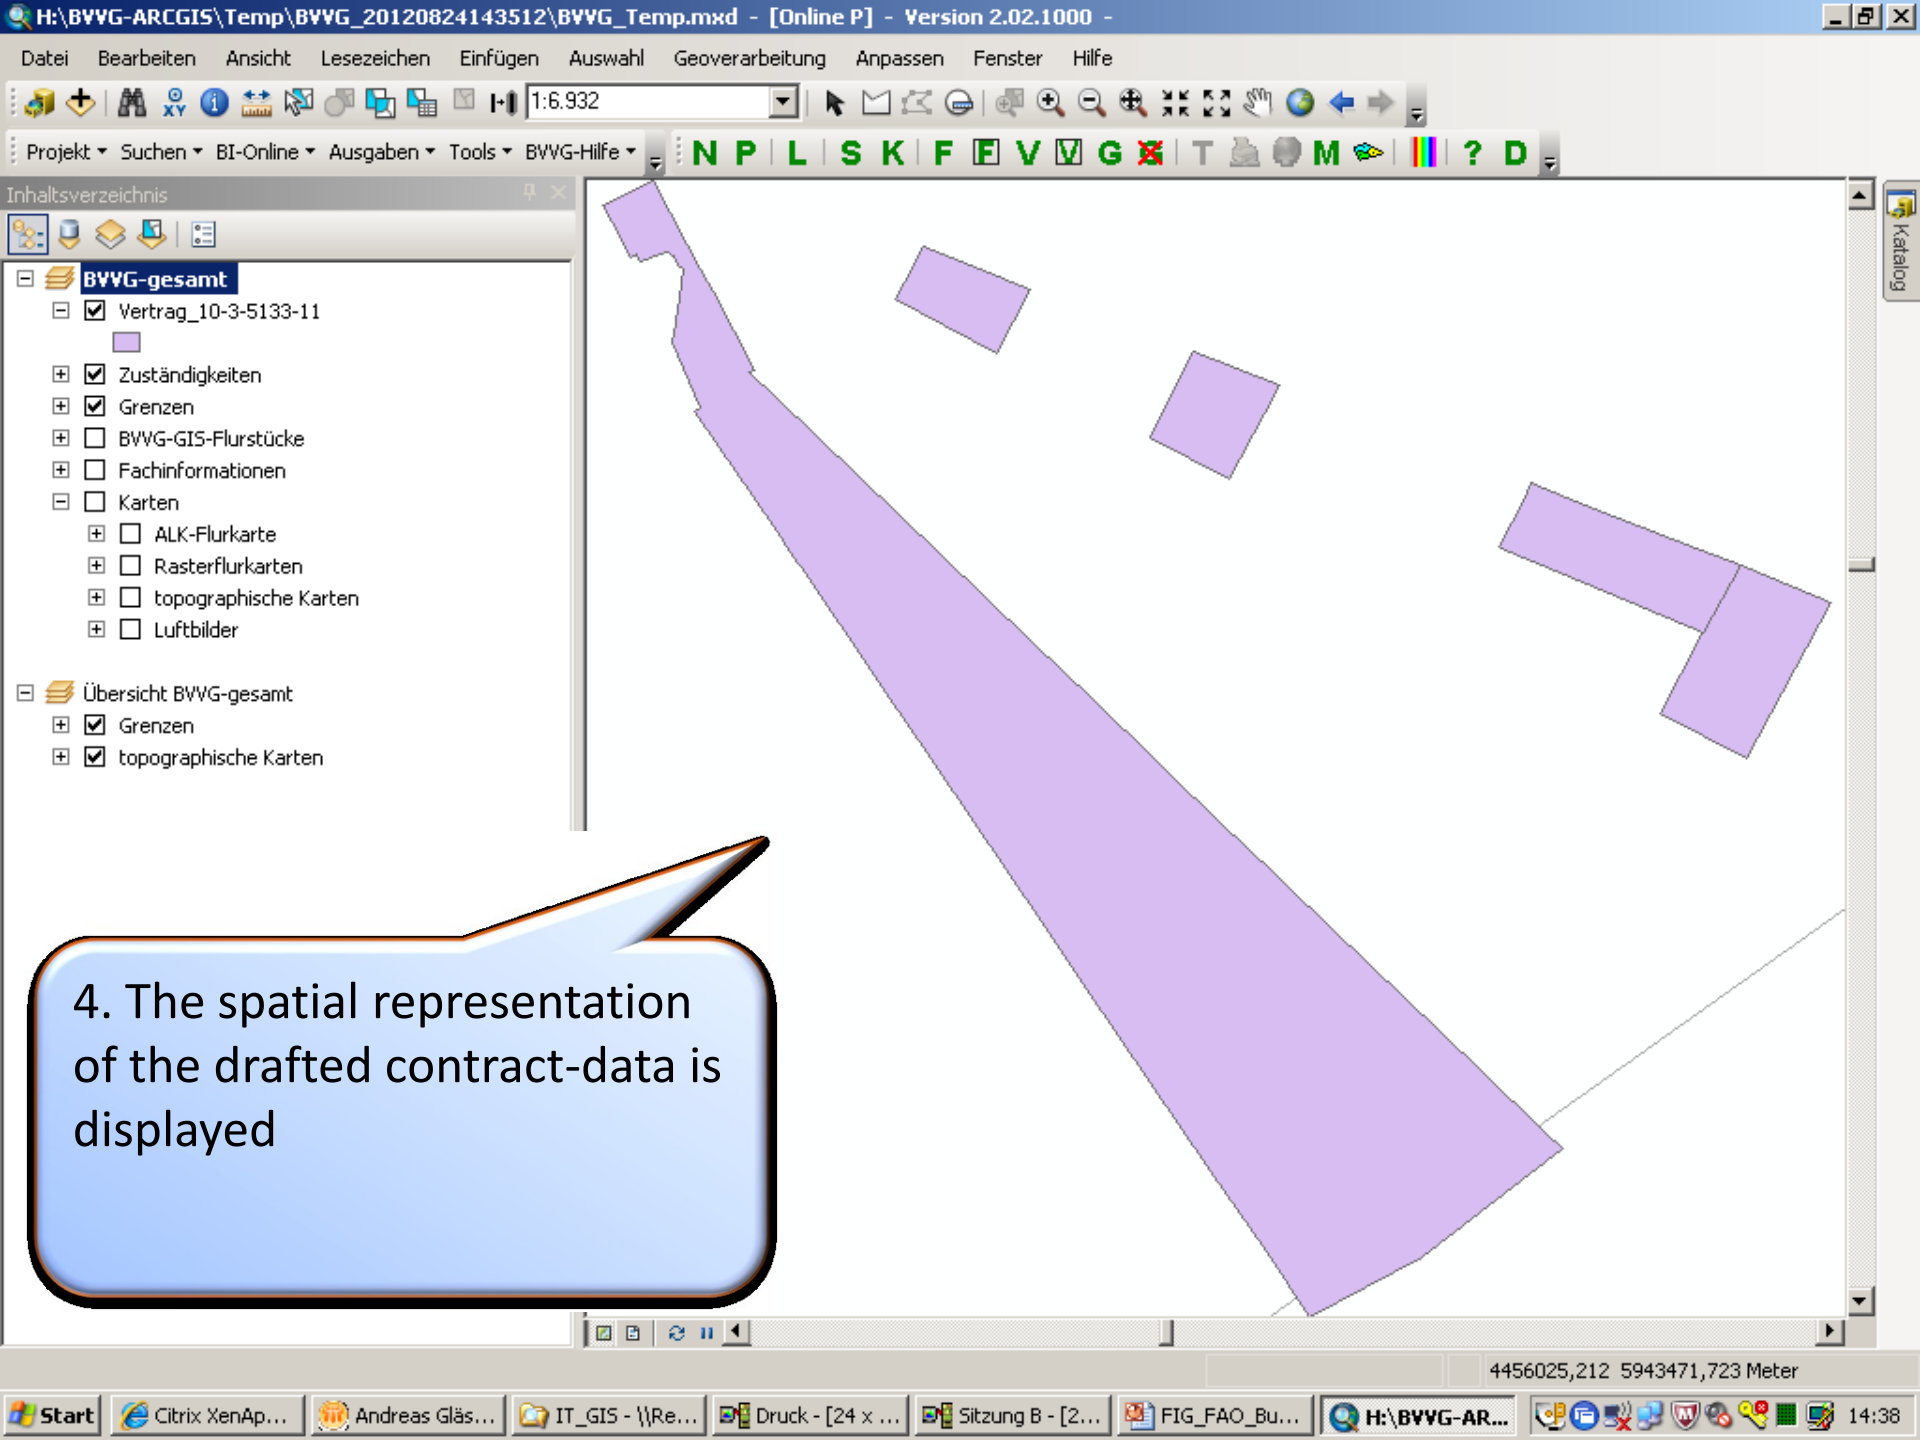

BVVG's Land Information System for valuing of an asset due to tendering

1. Open the BVVG-GIS offline
2. Choose one of the pre-defined procedures

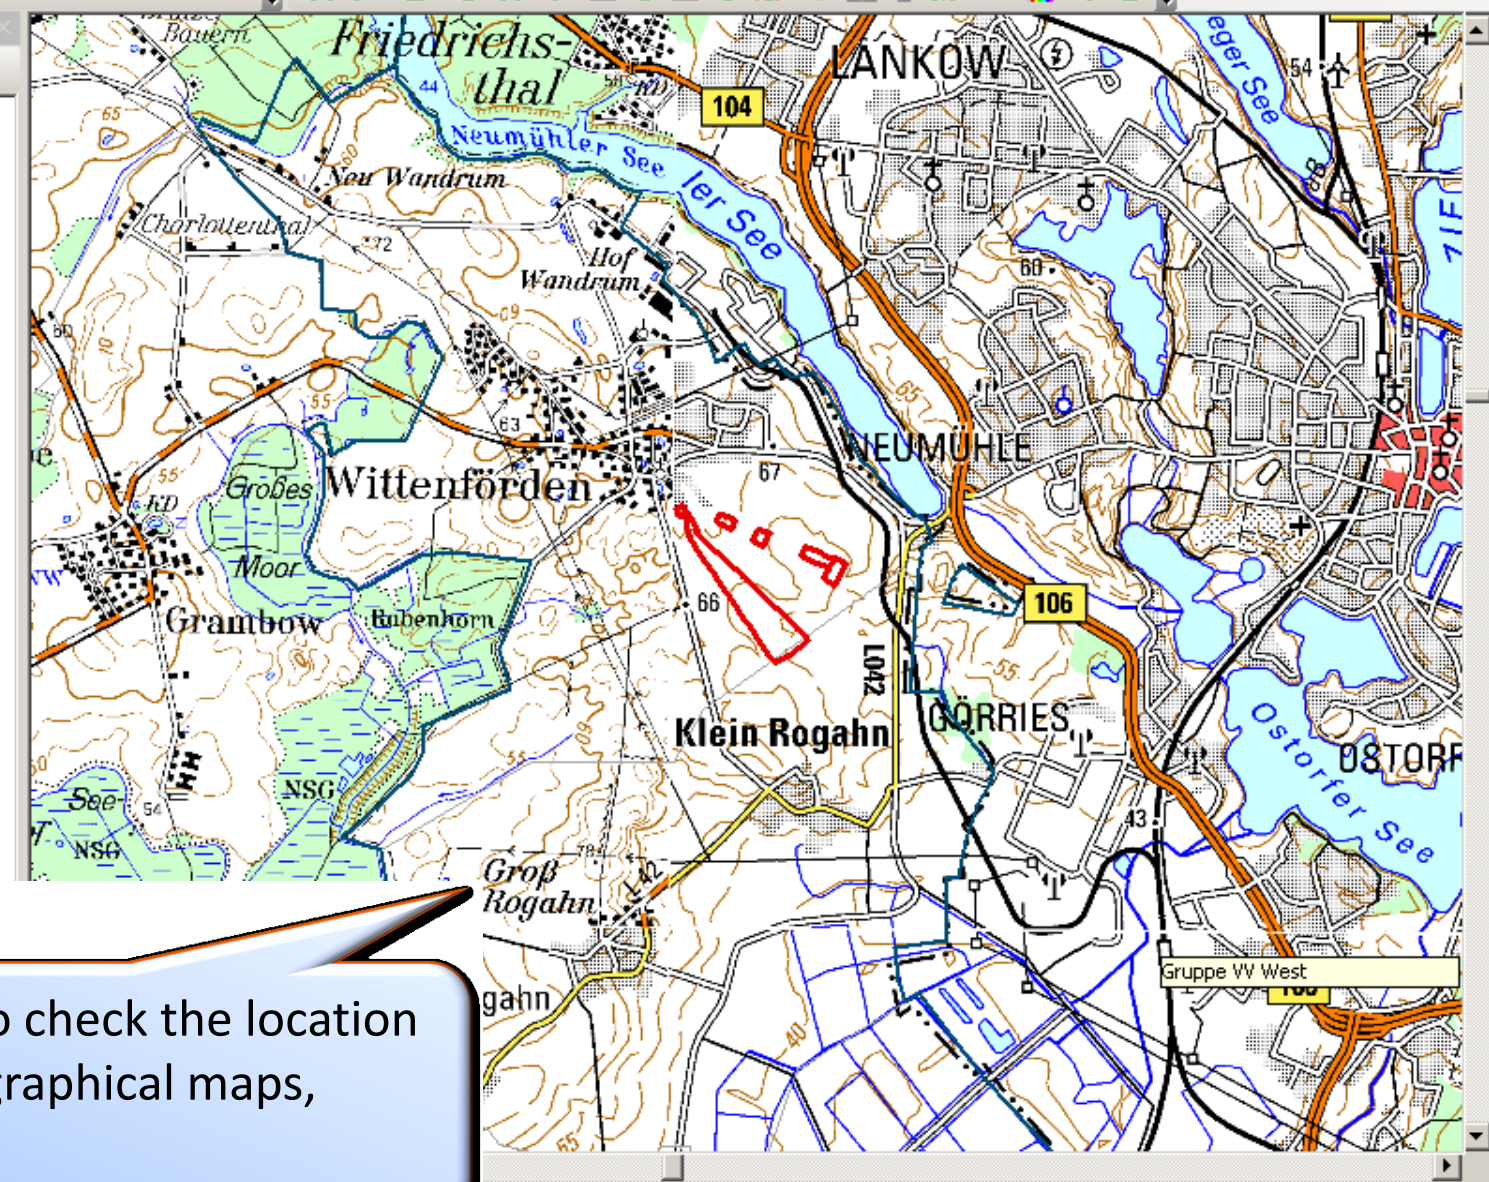

3. After specifying the search-path (here: the Contract-number) an online connection from the GIS to the basic Land Information Database will be established in the background

4. The spatial representation of the drafted contract-data is displayed

- BVVG-gesamt
 - Vertrag_10-3-5133-11
 - Zuständigkeiten
 - Grenzen
 - BVVG-GIS-Flurstücke
 - Fachinformationen
 - Karten
 - ALK-Flurkarte
 - Rasterflurkarten
 - topographische Karten
 - Luftbilder
- Übersicht BVVG-gesamt
 - Grenzen
 - topographische Karten

5. Possibility to check the location by using topographical maps, or

- BVVG-gesamt

ESTABLISHING LAND MARKET MONITORING

FOR DEDUCTING HISTORIC VALUES

Land base value map for "Khasha areas" in Darkhan.

"small residential areas / Жижиг хэмжээний орон сууцны эдлэн газар/талбай".

Spaltial planning categories according to GIZ recommended German Building Ordinance.

Prices from ALACGaC price-collection forms entered to LandManager-DBMS via QGIS-plugin Tool. Map made by glaesel, 20120425

The „LandManager – Software Package“

„LandManager – Graphical User interface“

- Managing non-spatial data on applications for land rights and other land contracts
- Collecting leasing/selling prices
- Base leasing rates/prices

„LandManager – OSS: QuantumGIS plug-in Tools“

- Surveying and updating of parcels
- Cadastre maintenance

- Collecting valuation-related information from private land transactions

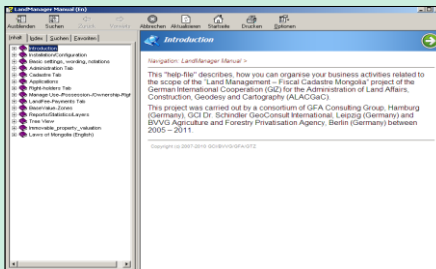

Parcel ID	Parcel Area	Parcel Value	Parcel Category	Parcel Status	Parcel Date

- Visualization, cadastral maps and spatial analysis

„LandManager – HelpFile“

- Capacity development and self-learning
- Knowledge transfer/database

LandManager – Back-end
(stores data, standard reports and layers)
(OSS: PostgreSQL RDBMS with PostGIS-extension)

„LandManager – WebGIS“

- Easy access to cadastral data and valuation related information

Standard interfaces
for other office or financial management
software

„LandManager – AuditTool“

- Standard reports and continuous auditing
- ALACGaC-Management Information System
- Internal and external reporting (including income from privatizing/leasing state-owned land)
- Monitoring of the land market (development of leasing/selling prices)

Change of land-prices in Mongolia (Ulan Bator land-prices in Mongolian Tugrug / sqm for private residential use)

Producing statistics for monitoring progress in the privatisation process, prices, and mass valuation of the assets.

LESSONS LEARNED

- An IT-based land information system is a valuable tool to support these assignments
- State-land management and privatisation is a long-term task especially when including the development of a land-market monitoring system
- Accordingly, the development on an IT-system which supports state-land management is a long-term task. It has to be adapted to changing management and privatising conditions and to additional or new requirements which will occur during the management and privatisation period.
- Therefore, it's recommended to develop an IT-strategy for planning and organising the development and maintenance of the IT-support (e.g. using an IT-Service management framework like ITIL)

LESSONS LEARNED

- The IT-architecture and applications should support the transfer of know-how between headquarters and distant branchoffices to empower self-learning capabilities and avoid high travel costs
- For a faster ROI an It-based LI-system should be developed and deployed in defined steps (IT-strategy) instead of designing a perfect IT-system that ends as stillborn project
- The system should contain a complete inventory of all assets and include a management information system for internal and external (financial) reporting.

THANK YOU FOR YOUR ATTENTION !
